Reasons for Allowance

Claims 1-4 are allowed over the prior art of record because the prior art of record including closes US Patents Shibata (US 5657172) and Wakabayashi et al (US 5905255) considered individually or in combination fail to disclose or fairly teach an objective lens driving device with two focusing coils including the combination of a first yoke and a second yoke holding first and second magnets disposed within the coils and a bridge yoke for connecting the first and second yokes.

Shibata discloses a bridge yoke (36) that connects a yoke that is within a single focusing coil and a yoke that is outside of the coil in order reduce magnetic flux leakage. The reference cannot be combined with applicant's admitted prior art for the reasons provided in applicant's arguments filed 3/17/2006. The reasons include that by combining the references the problems discussed on page 9 lines 37 and page 10 lines 1-15 of the specification would occur; including 1) decreasing range of movement of the objective lens in a focusing direction, 2) increasing thickness of the driving apparatus, and 3) hampering the driving of the device in the tracking direction.

Wakabayashi et al discloses an objective lens driving apparatus that includes two focusing coils and two yokes for holding first and second magnets disposed within the focusing coils (fig. 16), which is capable of moving a tilting direction. Wakabayashi fails to disclose a yoke bridge connecting the first and second yokes as recited in claim 1.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ohno (US 2002/0071189) discloses an objective lens actuating device with a focusing coil that is around a first and second yoke with first and second magnets attached used to drive the device in a focusing direction. Ezawa (US 5706272) discloses an optical driving mechanism with two focusing and coils wherein the yokes within the coils are connected to the yokes outside of the coils via a yoke bridge.
